

THE ARCHITECTURAL PLAYBOOK FOR ASTROLOGICAL TRIANGULATION

Automated Vedāṅga Jyotiṣa Analysis — Strict, Multi-Dimensional Rule-Out & Synthesis Engine · v2 (with Computational Implementation Addendum)

THE ARCHITECTURAL PLAYBOOK FOR ASTROLOGICAL TRIANGULATIONAutomated Vedāṅga Jyotiṣa Analysis Ke Liye Ek Strict, Multi-Dimensional Rule-Out & Synthesis Engine

SECTION 1: CORE PHILOSOPHY & OBJECTIVE (Mool Siddhant)Yeh playbook kisi bhi standard ya open-ended astrological chart analysis ke liye ek strict aur non-negotiable execution engine hai. Iska poora working model ek dual-phase paradigm par tika hai: **Retroactive Validation (Past Analysis)** aur **Empirical Projection (Future Prediction)**. Humara primary directive yeh hai ki humein kisi bhi tarah ki superficial ya single-factor interpretation ko poori tarah eliminate karna hai—jaise kisi ek isolated planet ka gochar dekh kar ya sirf ek Vimsottari Daśā lord ko dekh kar koi blanket prediction de dena bilkul mana hai. Iske bajaye, AI ko ek multi-dimensional synthesis engine ki tarah kaam karna hoga. AI ka kaam hoga alag-alag paddhatiyan aur systems ko aapas mein triangulate karna, Macro-to-Micro Rule-Out Theory ke zariye background noise ko filter karna, aur future prediction par jaane se pehle native ke past data par minimum 90% confidence threshold (accuracy) achieve karna. Algorithmic looping ya kisi bhi tarah ke cognitive bias ko rokne ke liye, is playbook mein diye gaye kisi bhi hypothetical example ko sirf ek structural archetype (pattern) maana jaye. AI native ke real-world dataset ko inhi specific sample configurations mein zabardasti fit karne ki koshish bilkul nahi karega. Iske bajaye, woh native ke unique planetary matrix ko N-number of potential combinations par dynamically evaluate karega.

SECTION 2: THE EXPANDED MATRIX DATABANK (Input Variables)Kisi bhi tarah ka analytical deduction shuru karne se pehle, AI ko native ka complete astronomical aur mathematical footprint in char layers ke andar organize, map aur process karna hoga:**2.1 Foundational Coordinates & Positional Geometry (Bunyaad)**

- Janma-Vivaraṇa (Birth Spacetime Data): Isme birth ki exact date, sahi time, aur perfect geographic coordinates shaamil hain, jisse absolute coordinate system taiyar hota hai. Iske zariye local sidereal time aur sidereal day configuration calculate ki jaati hai.

- The Lagna (Ascendant): Eastern horizon par rising sign ka exact degree, nakshatra aur pada. Yeh poori zindagi ka ek structural frame taiyar karta hai, physical vehicle (D1) ko design karta hai, aur baaki ke barah gharon (houses) ka baseline orientation set karta hai.

- The Nonary Planetary Matrix (Nava-Graha): Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn, Rāhu, aur Ketu ka longitudinal data (Sign, Degree, Minute, Second), unka Nakshatra occupancy, aur unka specific Cara-Pāda (quarter) position.**2.2 Functional Governance & Relative Significations (Maalikhana aur Karakatwa)**

- Bhrātri/Bhāva-Adhipati (House Lordships): Lagna ke mutabik sabhi 12 gharon ke temporal rulers ki pehchan karna. AI ko is specific rising sign ke liye har ek planet ka functional nature (Śubha / Benefic, Krūra / Malefic, ya Taṭastha / Neutral) calculate karna hoga, taaki unke inherent nature (Nisargika) aur unke operational deployment (Tātkālika) ke beech ka farq saaf samajh aa sake.

- Jaimini Cara-Kāraḥ: Sabhi sat (7) ya aath (8) planets ko unke longitudinal degrees ke mutabik highest se lowest order mein sort karna (nodes ko exclude karke ya criteria ke hisab se uniform 8-planet system apply karke). Isse har ek planet ko apna ek absolute role milta hai:

- Ātmakāraka (AK): Soul ka primary purpose, lessons aur astitva.
- Amātyakāraka (AmK): Career direction, intellect, aur execution power.
- Bhrāṭṛkāraka (BK): Siblings, core desires, aur short journeys.
- Māṭṛkāraka (MK): Maa, emotional security, aur fixed assets (property).
- Putrakāraka (PK): Bachche, higher education, aur creative intelligence.
- Pitrkāraka (PiK): Pita, lineage, aur authority ka guidance.
- Jñātikāraka (GK): Obstacles, karza (debts), bimari (diseases), aur competitive edge.
- Dārakāraka (DK): Life partner, business partnerships, aur long-term structural unions.

dharti Divisional Framework (Varga D1 se D60)Humara system Şodaşavarga (16 divisional charts) aur us se bade micro-charts ko alag-alag magnifying glasses ki tarah deploy karega. D1 chart mein dikhne wal a koi bhi event promise tab tak final nahi mana jayega, glam tak uske respective Varga chart se micro-structural confirmation na mil jaye: +-----+ |

THE VARGA ARCHITECTURE

-----+ Chart Identifier		Dedicated Domain & Micro-Analytical Scope		+-----	
-----+-----		+ D1 (Rāṣi)		Physical body, baseline potential,	
overall macro-frame.		D2 (Horā)		Wealth accumulation, liquid assets, speech, core values.	
D3 (Drekkaṇa)		Siblings, courage, self-effort, short travels.			
D4 (Caturthāṃśa)		Real estate, fixed assets, maa, inner contentment.		D7 (Saptāṃśa)	
Progeny (children), creativity, lineage continuation.		D9 (Navāṃśa)		Spousal profile, internal str	
ength, late-life dharma.		D10 (Daśāṃśa)		Career hierarchy, professional impact, societal status.	
D12 (Dvādaśāṃśa)		Ancestral lineage, parents, genetic conditioning.		D16 (Ṣoḍaśāṃśa)	
Vehicles, material comforts, psychological luxuries.		D20 (Viṃśāṃśa)		Spiritual evolution, upāsa	
nā, religious alignment.		D24 (Caturviṃśāṃśa)		Formal education, academic retention, intellectua	
l skill. D30 (Trimśāṃśa)		Evils, structural miseries, character flaws, disease.		D60 (Ṣaṣṭyāṃśa)	
Past-life residual karma; ultimate macro tie-breaker.		+-----		+-----	

-+2.4 Astronomical Potency & State Dynamics (Bala aur Avasthā)

- The Complete Şađbala Profile: Planets ki absolute numerical strength jo che (6) alag factors se nikalti hai: Sthāna-bala (Positional), Dig-bala (Directional), Kāla-bala (Temporal), Ceşṭā-bala (Motional), Naisargika-bala (Natural), aur Drq-bala (Aspectual).

- **Iṣṭa-phala vs. Kaṣṭa-phala Equations:** Yeh planet ke directional valence ka definitive indicator hai. AI ke liye high Ṣaḍbala percentage ko ek blanket positive sign maanna sakht mana hai. Kisi planet ke paas 150% Ṣaḍbala (massive raw volume aur impact capacity) ho sakta hai, par agar uska Kaṣṭa-phala score high hai, toh iska matlab hai ki woh planet apni dasa mein jo bhi mushkil ya transformative events layega, unhe bohot zyada amplified force ke saath deliver karega.

- **Viṃśopaka Bala & Vaiśeṣikāṃśa Scales:** Divisional systems ko mila kar planet ki positional strength calculate karna, aur unhe unke friendly, exaltation, ya own-sign vargas ke basis par quantitative health metrics assign karna (jaise Pārijāta, Gopura, ya Simhāsana states).

- Planetary Avasthās: Har planet ka operational status aur uska emotional state:
 - Age States: Bāla (Infant), Kumāra (Youth), Yuvā (Adult—jo full output deta hai), Vṛddha (Old), Mṛta (Dead—jo minimal physical manifestation deta hai).

- Consciousness States: jāgrita (Awake), Svapna (Dreaming), Susupta (Sleeping).

- Temperamental Moods (Dīptādi): Dīpta (Exalted/Radiant), Svastha (Own sign/Healthy), Pramudita (Lighted), Śānta (Peaceful), Dīna (Miserable), Vikālā (Combust), Khala (Angry/Cruel), Duhkhita (Grieved)

- 5 Coordinate Systems: Placidus Cusp Geometry vs. Bhāva-ChalitSystem ko traditional equal-house R framework ke saath-saath unequal Placidus Cusp System ko bhi systematically parse karna hoga. Al

ko Bhāva-Chalit chart ko cross-reference karke yeh verify karna hoga ki koi planet chalit mein house shifft nahin kar raha. Agar koi planet Rāśi chart mein Leo sign mein 5th house mein baitha hai, par Placidus calculation ke mutabik uski longitudinal degree use 4th house cusp ke andar le aati hai, toh AI ko yeh deduction nikalna hoga ki planet ka environment toh 5th house (Leo significations) ka rahega, par uske physical results, circumstances aur real-world outcomes poori tarah se 4th house domain se anchored honge.

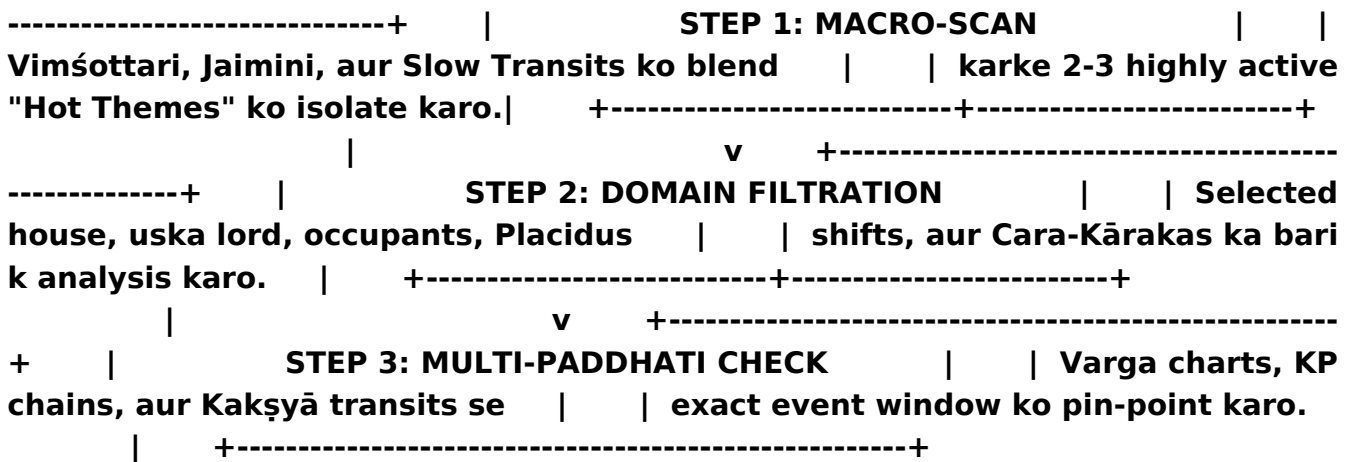

2.6 Mathematical Infrastructures (Ashtakavarga aur Special Points)

- **Astakavarga Framework:** Individual planetary contributions ke liye Bhinnāstakavarga (BAV), collectiv

e house strengths ke liye Samudāya Aṣṭakavarga (SAV) scores, aur microscopic timing ke liye Kakṣyā distribution (jahan har ek zodiac sign ko 3°45' ke 8 alag zones mein baanta jata hai jise alag-alag planet-nodes control karte hain).

- Special Refraction Points: Ārūḍha Lagna (AL) (duniya ki nazar mein self-perception), Upapada Lagna (UL) (shaadi aur spouse ka physical manifestation point), Dāra-Pada (A7), Bhrigu Bindu (Rāhu aur Moon ka sensitive midpoint jo bade events ko trigger karta hai), aur dark shadow nodes jaise Māndi aur Gulika.

SECTION 3: STEP-BY-STEP PAST ANALYTICAL MATRIX (Macro-to-Micro Rule-Out Engine) Jab bhi kisi past timeline ke baare mein open-ended query aayegi (jaise: "Analyze karo ki pichle 5 saalon mein native ki life mein kya major events hue") , toh AI bina kisi prior knowledge ke andhadhundh guesses nahi karega. Woh Rule-Out Theory ka use karke poore timeline ko macro-cosmic shifts se micro-timing triggers tak niche diye gaye process se scan karega:

Step 1: Macro-Scan For "Hot Themes" (Bade Patterns Ki Pehchan) AI sabse pehle diye gaye poore timeline ko samne rakhega aur alag-alag independent predictive networks mein overlapping indicators ko dhoondhega. Kisi bhi life-theme ko "Hot" ya "Active" tabhi ghoshit kiya jayega jab use alag-alag systems se concurrent votes milenge:

1. Chronological Timekeepers (Vimśottari Daśā Matrix): Isolate karo ki us duration mein kaunsi Mahādaśā (MD), Antardaśā (AD), aur Pratyantardaśā (PD) chal rahi thi, aur D1 chart mein unka house lordship aur occupancy kya hai.
2. Relational Coordinate Trackers (Jaimini / Rāśi Daśā Systems): Usi timeline par Nārāyaṇa Daśā, Sudaśā, ya Yoginī Daśā ko parallel chalo. Dekho ki kaunse sign-environments active hain aur unke andar kaunse Cara-Kāraḥ baithe hain ya unhe aspect kar rahe hain.
3. Structural Heavyweights (Slow Gochara Shifts): Track karo ki us timeline ke dauran transit Saturn (Śani), Jupiter (Guru), aur nodal axis (Rāhu-Ketu) kis rashi ya ghar se guzar rahe the.

- Saturn: Yeh dikhata hai ki life ke kis area mein structural pressure, zimmedari, limitations, ya karmic consolidation chal raha tha.

- Jupiter: Yeh dikhata hai ki kis area mein expansion, blessing, wisdom, ya protective elevation mil rahi thi.

4. Environmental Baseline (SAV Density Scan): Check karo ki yeh transiting heavyweights jab un signs se guzar rahe the, toh wahan SAV points exceptionally high the (above 30, jo smooth aur high-impact manifestation deta hai) ya critically low the (below 22, jo volatile, high-friction, ya depleted events trigger karta hai).

Macro Triangulation Rule: Agar Vimśottari system kisi aise planet ko highlight kar raha hai jo 7th house se connected hai, Nārāyaṇa Daśā ek aise sign ko activate kar rahi hai jisme Dāra-Kāraḥ (DK) baitha hai, aur transit Jupiter us dauran active ke natal 7th house ko cross kar raha hai ya Upapada Lagna (UL) ko aspect

kar raha hai, toh **RELATIONAL / MARRIAGE THEME** ko highly active maana jayega. Baaki saare unrelated domains (jaise foreign education, real estate speculation) ko us specific timeline ke liye systematically rule-out ya secondary tier par dal diya jayega.

Step 2: Deep-Dive Domain Filtration (Success vs. Cancellation Reversal Logic) Ek baar jab active theme lock ho jaye, toh AI ko do parallel algorithmic tracks par kaam karna hoga: **Track A (Manifestation Vectors)** aur **Track B (Obstruction/Cancellation Vectors)**. AI sirf event hone ke signs nahi dhoondhega, balki event tootne ya cancel hone ke hidden micro-signatures ko bhi bariki se scan karte huye chalega taaki event ka exact nature aur outcome crystal clear ho sake:

- Sign aur Rashi Characteristics: House cusp par jo zodiac sign hai uski quality check karo. Kya woh *Car* (Movable—jo rapid aur disruptive changes dikhata hai) hai, *Sthira* (Fixed—jo long-delayed aur stable, institutionalized outcomes dikhata hai) hai, ya *Dvisvabhāva* (Dual—jo alternating states ya double outcomes dikhata hai) hai?

- The Valence Matrix (Ishta vs. Kashta Reversal): House lord ko isolate karo. Uska *Ṣaḍbala* check karo aur uske *Iṣṭa-phala* vs. *Kaṣṭa-phala* balance ko evaluate karo. Agar 7th house (Marriage) ya 11th house (Gain) ka lord D1 aur D9 mein strong hai (High *Shadbala*), par uske paas extreme *Kaṣṭa-phala* score hai, toh AI ka deduction yeh hoga ki "Shaadi ki baatein pakki toh hongii (due to strong theme activation), lekin woh extreme mental stress, friction, ya external interference ki wajah se last moment par break ya cancel ho jayegi." High volume plus high *Kashta* hamesha ek "explosive near-miss" ya cancellation ka event texture banata hai.

- The Mood and Avastha Blockades: Us ghar ke andar baithe sabhi planets ko evaluate karo. Unka *Avasthā* profile aur temperamental mood check karo. Agar koi occupant ya main *dasha/transit* planet *Duḥkḥita* (grieved), *Khala* (angry), ya *Mṛta* (dead) state mein hai, toh woh us house ke smooth promises ko corrupt kar dega, jisse poore event ka texture kafi volatile aur stressful ho jayega. Baatein aage badhne ke baad bhi end moment par structural breakdown ya cancellation ka prediction aayega kyunki planet ke paas event ko boundary line ke paar le jaane ka "functional mood aur stamina" nahi hai.

- Placidus Shift Corrections: *Bhāva-Chalit* chart ko review karke check karo ki occupant ya lord wahan stable hai ya adjacent house mein shift ho kar physical results ke core coordinate ko hi badal raha hai.

- Aspectual Geometry (*Drishti*): Sabhi planetary aspects ko map karo. Traditional *Parāśarī* forward aspects aur *Jaimini* sign-based aspects ko blend karke dekho ki kis tarah ke benefic ya malefic influences house environment ko mold kar rahe the.

Step 3: Multi-Paddhati Micro-Targeting & Precise Timing (The Sharp Yes/No & Reversal Filter) Ghar aur planets ke mood ko dekhne ke baad, event ko absolute confirm karne aur timing ko ek specific month, week, ya day tak narrow down karne ke liye, AI char alag systems ka use karke final triangulation execute karega: **1. Varga Confirmation & Tie-Breaker:** Agar career ya marriage shaping event D1 mein hot hai, toh seedhe respective Divisional Chart (D10 / D9) kholo. Active *daśā* planets ka respective *varga* ke andar structural alignment (jaise *kendra/trikona* placement, high *Viṃśopaka* score) hona compulsory hai. Agar D1 haan bole par corresponding *varga* (jaise *Navāṃśa* D9) mein *dasha* lord *Trimśāṃśa* (D30) ke paap-shashtiamsa ya debilitation zone mein phansa hai, toh AI declare kaarega ki internal structural weakness ki wajah se event real world mein delivered nahi ho payega—meaning, *rishta* pakka hokar cancel hoga. **2. KP Stellar Significance Chains (The Ultimate Negation Tool):** *Krishnamurti Paddhati* apply karke active period ki real capability trace karo. Iska planet-to-star-to-sub-lord chain calculate karo: Planet → Star Lord (Energy Ka Source) → Sub-Lord (Manifestation Ka Final Verdict) AI dekhega ki kya sub-lord un houses ko signify kar raha hai jo

hai. Agar aisa structural stress point background mein chal raha hai, toh AI blind single-factor prediction ko reject karega aur yeh clear pattern nikaalega ki event shuru hone ke baad kisi un-expected dispute ya a legal/family issue ki wajah se cancel ho gaya. 4. Ashtakavarga Kakṣyā Narrowing: Active sign ke andar chal rahe transit ko 3°45' ki Kakṣyā zones mein break karo. Transit planet apna physical result sirf tab hi deliver karega jab woh us specific planet ki Kakṣyā se guzar raha ho jisme us transiting planet ke Bhinnāṣṭakavarga mein ek positive bindu diya ho. Is highly mathematical method se event ki timing ko 4-5 days ke narrow window mein pin-point kiya ja sakta hai.

AI ko kisi rigid template ya single-track thinking se bachane ke liye, use is combinatory matrix ka use karna hoga. Yeh system har ek astrological event ko N-number of variables ka ek intersection maanta hai. Niche diye gaye do comprehensive structural maps yeh dikhate hain ki kaise completely different configurations ko alag-alag systems se blend karke ek single, bulletproof deduction tak pahucha jata hai:

-+ SYSTEM / TECHNIQUE		CONFIGURATION VARIANT I	CONFI
GURATION VARIANT II	+-----+	-----+	-----

arwana" **STRICTLY MANA** hai—kyunki aisa karna ek hidden calibration channel k hol deta hai jo system ko sirf usi ek native ke past par overfit kar deta hai aur uski genuine forward-predictive power ko poori tarah khatam kar deta hai. Iske bajaye validation ek strict **BLIND PROTOCOL** ke through hoga: Engine pehle apni ranked prediction (committed call) deta hai, native use apni real memory se privately compare karta hai, aur agar koi miss hoti hai toh us miss ko sirf do tarah se diagnose kiya jayega—ya toh koi relevant astrological element engine mein missing tha (yeh ek **COVERAGE** gap hai, jise naya witness add karke theek kar te hain), ya phir saare elements maujood hone ke bawajood unka combination, weighting ya convergence-logic galat tha (yeh ek **DISCRIMINATION/LOGIC** gap hai, jise combination rules theek karke suljhate hain, na ki aur noise add karke). Har ek rule-change sirf aur sirf **śāstra** (classical pramāṇa) ke aadhar par justify hoga, kabhi bhi "isse output match ho gaya" ke aadhar par nahi, aur har change ko ek rule-change log mein uske śāstric citation ke saath record kiya jayega taaki yeh independently audit ho sake ki koi bhi fix answer-chasing nahi tha. Is tarah 90% accuracy ko tune karke achieve nahi, balki blind comparison se **DEMONSTRATE** kiya jata hai. 2. Isi exact, locked, non-calibrated multi-dimensional framework ko jyon-ka-tyon native ke future timeline par apply karo. 3. Aane wali dasā transitions, structural transit movements (Saturn, Jupiter, Nodes), aur micro-timing vectors ko triangulate karke absolute logic-driven future trends aur actionable insights outline karo.

SECTION 6: DESIGN ARCHITECTURE FOR OUTPUT DELIVERY High scannability aur readability maintain karne ke liye, AI apna final interpretation isi structured layout mein deliver karega. Long-form analytical explanations ko short summaries aur proper visual markdown components ke saath balance kiya jayega taaki text padhne mein easy ho:

System Output Template:

- **The Activated Macro-Pattern** Ek detailed, long-form paragraph explanation jo yeh dikhayega ki kaise independent predictive structures ne ek sath milkar timeline mein se specific active theme ko filter out kiya.
 - **Structural Micro-Dissection** Ek explicit long-form analysis jo house lordships, Cara-Kāraṅkas, Bhāva-Chalit spatial shifts, aur active planets ke internal emotional states (Avasthās) ko dissect karega (Event Success vs. Cancellation Reversal Filters ke saath).
 - **Cross-Paddhati Verification & Timing** Ek extremely sharp breakdown jo event ko Varga confirmation, KP sub-lord parameters, aur microscopic Ashtakavarga Kakṣyā windows se pinpoint karega.
 - **The Core Synthesis Summary** Ek highly scannable blockquote component jo native ke real-world event, uske exact timing window, aur uske life path transition ko brief terms mein summarize karega.
- Yeh playbook ab poori tarah se aapke samne end-to-end load ho chuki hai. Jab bhi aap kisi chart ka raw data ya koi naya sawal enter karenge, mai isi absolute structure ke mutabik cross-connections establish karke patterns triangulate karunga. Data forward karne ke liye aap ready hain?

=====

ADDENDUM (v2): COMPUTATIONAL IMPLEMENTATION & ENGINE DIRECTIVES

=====

Yeh addendum upar likhi gayi mool playbook (Sections 1-6) ko replace nahi karta; woh saari philosophy, matrix-databank definitions, rule-out theory aur output-template jyon-ke-tyon binding rehte hain. Yeh a

ddendum sirf yeh document karta hai ki us poori methodology ko ab ek live, deterministic software engine ('advance_astrology') ke andar kaise mechanically implement kiya gaya hai, aur kuch refinements ko explicitly directive bana deta hai jo blind, calibration-free prediction ke liye non-negotiable hain.

SECTION 7: THE DETERMINISTIC COMPUTATIONAL ENGINE (Implementation Backbone)

Ab se Section 2 ka poora matrix-databank kisi manual ya approximate source se nahi, balki ek high-precision astronomical engine se compute hoga. Saari planetary positions Skyfield library aur NASA/JPL DE-series ephemeris kernels (DE421) se nikalti hain, jisse arc-second level ki accuracy milti hai. Engine do ayanāṁśa models support karta hai—Lahiri (Citrapakṣa, default) aur Krishnamurti/KP (jise 'kp' alias se bhi call kiya ja sakta hai)—taaki KP-specific kaam apne sahi ayanāṁśa par ho. House framework dono modes mein available hai: traditional whole-sign Rāśi, aur unequal Placidus cusp geometry (jo Bhāva-Chalit aur KP cuspal sub-lord dono ke liye use hoti hai). Sabse important directive yeh hai ki engine fully DETERMINISTIC aur READ-ONLY hai: ek hi input par hamesha bilkul same output aata hai, ismein koi randomness, koi hidden state, ya koi "creative" arithmetic nahi hai. Triangulation aur synthesis ka saara MATH ab Python mein mechanically execute hota hai—ek hi assembly, har baar same tarike se—taaki koi number kabhi hallucinate ya miscompute na ho. Koi bhi natural-language / LLM layer (agar future mein add hoti hai) sirf final prose likhne ke liye optional hai aur use kabhi bhi positions, scores ya verdicts ko dobara compute karne ki ijaazat nahi hai; woh sirf engine ke deterministic dossier ko padh kar bayaan karegi.

SECTION 8: THE WITNESS-FAMILY CONVERGENCE ARCHITECTURE

Section 3 ki Macro-to-Micro rule-out theory ko engine ek "witness-family convergence" model ke roop mein implement karta hai. Har ek paddhati ya technique ek independent WITNESS-FAMILY hai jo har life-event domain ke liye ek vote casts—vote ki ek polarity hoti hai (manifestation/Track-A ke liye +, ya obstruction/cancellation/Track-B ke liye –) aur ek weight jo us witness ki śāstric strength se derive hota hai. Kul milakar unnis (19) witness-families do kism ki hain. STATIC (lifelong promise, jo poori zindagi constant rehti hai): house-lord strength, occupants, Argala (aur uska counter Virodhārgala), natural kārakas, dedicated-varga confirmation, Sarvāṣṭakavarga density, Avasthā mood (Dīptādi), graha-dṛṣṭi (aspect), Bhāva-Chalit shift, natal yogas, Arudha-pada occupants, Jaimini chara-kāraka placement, Vaiśeṣikāṁśa/Viṁśopaka multi-varga strength, aur Maraka involvement. DYNAMIC (woh jo sirf us particular window ko activate karti hain): Vimśottari Mahā/Antar/Pratyantar daśā, rashi-daśās (Nārāyaṇa, Chara, Sudasā), slow gochara (Śani, Guru, Rāhu-Ketu), KP sub-lord verdict, aur Varṣaphal Muntha.

THE CONVERGENCE RULE (background-noise filter): kisi bhi domain ko "active" tabhi declare kiya jayega jab kam se kam TEEN independent witness-families converge karein, AUR un mein se kam se kam DO families DYNAMIC hon (yaani us window ko genuinely light kar rahi hon). Akele ek factor se koi blanket call kabhi nahi banegi—yeh Section 1 ke single-factor-ban ko mechanically enforce karta hai.

THE PROMISE-GATE: dynamic activation tabhi hi count hoti hai jab chart us domain ko natal level par promise karta ho (static promise ka net > 0). Jis domain ko chart promise hi nahi karta, woh sirf transit ya daśā ke bharose manifest nahi ho sakta—daśā/gochara ek promised cheez ko trigger karte hain, ek non-existent cheez ko create nahi karte.

DISCRIMINATION VIA FIELD-RELATIVE SALIENCE: yeh ek critical directive hai. Kyunki itne saare elements ke hote hue kisi bhi date par koi na koi element lagbhag har domain ko point karta hai, isliye agar hum sirf absolute scores jod dein toh saare domains high lagne lagte hain (yeh ek real, observe-kiya-gaya fallacy mode hai—"sab kuch light up ho jaata hai"). Isko rokne ke liye engine converged domains ke beech min-max normalisation karke ek field-relative salience nikalta hai, taaki ranking domains ko SEPARATE kare na ki saturate. Iska seedha matlab yeh hai ki yahan 'confidence' ka arth hai us window ke andar relative salience (kaun sa theme sabse upar ubhar kar aaya), na ki koi absolute, calibrated probability—aur

r is system mein yahi sahi bhi hai, kyunki hum calibration karte hi nahi.

TRACK-A vs TRACK-B → TEXTURE: Section 3 Step-2 ki success-vs-cancellation logic ko engine do alag accumulators se implement karta hai—support (manifestation) aur obstruction (cancellation)—aur in dono ke ratio se event ka TEXTURE nikalta hai: clean manifestation, manifestation with friction, fixed-then-cancelled (explosive near-miss), ya blocked/does-not-manifest. Jab KP sub-lord ek hi saath fulfilment AUR negation dono house-sets ko signify kare, toh yeh explicitly "fixed but subsequently cancelled" ka definitive signature mana jata hai, bilkul jaisa Section 3 Step-3 prescribe karta hai.

SECTION 9: THE LIFE-EVENT DOMAIN TAXONOMY

Prediction abstract "houses" par nahi, balki concrete LIFE-EVENT DOMAINS par hoti hai, jinme se har ek apne classical house-set, negation-house-set, natural/chara kārakas, aur confirming-varga se map hota hai: Career (10,6,7,11; negation 5,8,12; Sun/Saturn/Mercury + Amātyakāraka; D10); Marriage (7,2,11; negation 1,6,10; Venus + Dārakāraka; D9); Wealth (2,11,5,9; negation 12,6,8; Jupiter/Venus; D2); Education (4,5,9,2; D24); Property/Vehicles (4,2,11; Mātṛkāraka; D4); Children (5,9,2; Putrakāraka; D7); Relocation/Foreign (3,9,12; Rāhu/Moon; D4); Health-crisis/Surgery (6,8,1; Mars/Saturn/Sun; D30; adverse-event); Litigation/Loss (6,8,12; Saturn/Mars + Jñātikāraka; D30; adverse-event); aur Spirituality/Dharma (9,12,5; Jupiter/Ketu; D20). Varga-confirmation hi event ke TYPE ko disambiguate karta hai—isi liye 8th-house se ka activation D30+Mars+6th se "surgery" banta hai jabki D9+Venus+7th se "breakup"—jaisa Section 2.3 ka micro-confirmation mandate kehta hai. Engine ka output-ceiling karmic CATEGORY hai: jahan do real-world forms ka astrological fingerprint genuinely identical ho, wahan engine ek most-likely call commit karega lekin saath hi category aur tied alternative form ko bhi naam dega, taaki honesty bani रहे.

SECTION 10: THE TIME-LOCALIZATION ENGINE (Sliding Sub-Window Timeline)

Sirf yeh keh dena ki "career ek live theme hai" prediction ke liye kaafi nahi—event ko TIME mein localize karna zaroori hai. Iske liye engine ek chhoti window (default ~183 din) ko poore multi-year span par slide karta hai (step ~30 din), har domain ki apni activation time-series banata hai, aur phir har domain ke peaks ko us domain ke APNE baseline ke against detect karta hai (continuous above-threshold runs ek distinct event hain; plateaus ek single peak mein collapse ho jaate hain; beech ki valleys do events ko a lag karti hain). Iska natija ek discrete, dated output hai—jaise "career 2021-11 aur 2025-02 par peak karta hai"—na ki ek dhundhla "6 saal mein kabhi active". Yeh approach jaan-bujhkar cross-domain "kaun le ad kar raha hai" wala sawaal nahi poochta (warna do sabse zyada-promise wale domains hamesha lead kar jaate), balki har theme ko uske khud ke against localize karta hai.

SECTION 11: THE VARṢAPHAL (TĀJIKĀ) ANNUAL LAYER

Year-resolution ke liye engine ek poora Tājika Varṣaphal layer compute karta hai. Solar return woh exact moment hai jab transiting Sūrya apni natal NIRAYANA (sidereal) longitude par wapas aata hai (engine isse bisection se precise nikalta hai). Us moment par us saal ki Varṣa-lagna cast hoti hai, aur Muntha—jo natal lagna se har ek poore saal ki age par ek rāsi aage badhta hai—ko nikala jata hai. Muntha jis bhāva mein girta hai woh us varṣa ka primary live-theme hai, aur Muntha-lord tatha Varṣa-lagna-lord us theme ko native ke natal domains se jodte hain. (Full Pañcādhikārī "lord of the year" bala-ranking, Sahams, aur Muddā daśā abhi consciously deferred hain aur jab blind-testing inki zaroorat dikhaye tab add honge.)

SECTION 12: THE ACTIVATION-WINDOW SCANNER & PRECISE TIMING

Section 3 Step-3 ke do precision-timing triggers ab ek reusable, deterministic scanner se compute hote hain. Pehla, Bhrigu-Nandi-Nāḍī degree-to-degree conjunction: jab koi slow transit kisi domain ke natal kāraka ya house-lord ke 2° ke andar aata hai, woh ek sharp event-trigger banata hai. Doosra, Aṣṭakavarga Kakṣyā narrowing: ek transit apna physical result tabhi deta hai jab woh ek bindu-bearing 3°45' kakṣyā-zone se guzar raha ho, jisse event ki timing ko 4-5 din ki ek narrow window tak pin-point kiya ja sakta hai. Scanner har activation-window ki boundary ko bisection se lagbhag ek-din ki resolution tak refine karta hai, taaki har detected theme-peak ke saath uske exact trigger-dates attach ho sakein.

SECTION 13: THE NO-CALIBRATION DOCTRINE & BLIND-VALIDATION PROTOCOL (

Supersedes Earlier Calibration Language)

Yeh is poore system ka sabse central, non-negotiable principle hai aur Section 5 Phase-III ki purani calibration-language ko officially supersede karta hai. System ko kisi bhi tarah native ke known events par calibrate, tune ya fit nahi kiya jayega. Iska ek sukshma lekin ghatak risk yeh hai ki bina answer bataye bhi, agar rules ko baar-baar tab tak badla jaye jab tak native ka reaction "haan yeh sahi hai" na kahe, toh native ke nods khud ek training-signal ban jaate hain—yeh "back-door" calibration hai jo system ko silently us ek vyakti par overfit kar deti hai. Isse bachne ka ekmaatra guardrail yeh hai ki har rule-change apne aap mein śāstra se justifiable ho ("Parāśara/Jaimini/KP aisa kehte hain"), na ki "isse output match ho gaya"; aur har change śāstric citation ke saath rule-change log mein darj ho.

DISCRIMINATION PRINCIPLE: yeh samajhna zaroori hai ki sirf "har element ko consider kar lena" hi kaafi NAHI hai. Itne saare multivalent elements ke hote hue, kisi bhi event ke liye baad mein koi na koi element "point karta hua" mil hi jata hai—yeh trivially true hai aur isi liye useless hai (yeh classic confirmation-bias / Forer trap hai). Asli skill yeh dhoondhna nahi hai ki "koi element fit hota hai", balki yeh hai ki INDEPENDENT witnesses ka CONVERGENCE true domain ko jhootho domains ke OOPAR rank kare. Isiliye engine ek hi mechanical assembly karta hai, bina kisi hindsight-nudging ke, taaki blind accuracy ka koi matlab ho. Coverage (zyada elements) zaroori hai par sufficient nahi; sharp discrimination (sahi combination-logic) hi 90% tak le jaati hai.

SECTION 14: COVERAGE LEDGER & DEFERRED EXTENSIONS

Abhi tak engine mein wired witnesses: house-lords (Śaḍbala + Iṣṭa/Kaṣṭa), occupants (functional nature), Argala/Virodhārgala (navagraha-only), natural kārakas, dedicated-varga confirmation, SAV density, Avasthā mood, graha-dṛṣṭi, Bhāva-Chalit, natal yogas, Arudha-pada, Jaimini chara-kāraka placement, Vaiśeṣikāṃśa/Vimśopaka, Maraka, Vimśottari (Mahā/Antar/Pratyantar), Nārāyaṇa/Chara/Sudasā rashi-daśās, slow gochara, full KP sub-lord verdict, aur Varṣaphal Muntha—saath hi BNN aur Kakṣyā precise-timing triggers. Consciously DEFERRED (jab tak blind-test miss inki zaroorat na dikhayee): deeper Vimśottari levels (Sūkṣma/Prāṇa), Kālachakra/Sthira/Shoola daśās, Tārā-bala aur nakṣatra-transit refinements, A1-A12 arudha-padas ka extended use, additional sphuṭas (Mṛtyu/Brahma/Yama), aur full Tājika year-lord bala. In sab ka authoritative, dated, śāstra-cited record repository ke docs/RULE_CHANGELOG.md mein rakha jata hai—wahi is system ki "constitution" hai jo guarantee karti hai ki har change tradition se aaya hai, native ke answers se nahi.
